

Protocol for Fast Track TURBT

At flexible cystoscopy:

Any patient thought to be likely muscle invasive tumour and candidate for cystectomy should:

1. Be listed on MAXIMs as FAST TRACK TURBT and phone secretary (Kay to begin with) in order to get a date
2. Have bloods, MRSA and MSU sent
3. Book CT thorax and urogram

They should then have a fast track pre assessment and TURBT within 2 weeks

The secretary will notify the CNS of the TCI date

The patient will be seen by a CNS on the ward during admission. They will give written information and arrange to contact the patient as soon as histology is available. At this point the CNS should ensure the patient has a date for regional MDT review and give the patient a date for oncology clinic review

At TURBT the surgeon should tick the 48 hour box on the orange 2ww histology request form.
